## Measuring Instructions

Waist:	Most customers will be aware that a kilt is worn high above the waist but remember some might not.
	Ask what the kilt is being worn for as for example a kilt for pipe band wear or highland dancing should be a neater fit so reduces the opportunity to slide down the body during wear (this can happen especially with a more portly figure).
	Always measure the waist around the navel (belly button) so higher than the clients natural waist.
Hip/Seat:	Make sure pockets are empty and feet together.
	Measure around the widest part of the hips - seat, the tape should be sufficiently taught it will not slide down but not too tight.
Length:	Measure from where the top of the kilt waistband will be worn to the length the customer requires.
	Bear in mind a slightly long kilt can be worn higher, a short kilt does not sit well worn below the waist.
